

## Campus Claim CD.

**Members:** Kaan Okumus, Wiktoria Sobieska

**Homepage Website Link:** - we are still having trouble connecting to the database and IT is currently working on it so we cannot provide a link to these pages. I have a photo instead for proof sorry!

**Imprint Page Link:** -

### Project File Organisation:

- public\_html/photos/ — stores all image files used on the site
- public\_html/index.html — main landing page
- public\_html/imprint.html — contains the imprint and disclaimer text

**CSS File:** The CSS file is responsible for displaying the overall appearance of the website. It includes the color scheme, font choices, our style choices, layout ideas etc.

CampusClaim is our website idea used to manage lost and found items on campus. The aim for this is to create an efficient way for students and staff to report lost/found belongings.

The design of CampusClaim focuses on creating a clean and easy to navigate interface. Our goal was to make the platform accessible for both students and staff by using clear headings and a straightforward layout. Each section is designed to guide users quickly to their intended usage while maintaining a simple and user-friendly layout.

Our intention for the colour scheme was to align with our campus' theme and so we chose colours such as: #005A9E and #002B5C which are shades of dark blue. We believe this complements our website well and represents our university. The font used is Nunito which just adds to professional look and is easy to read for a user.

The layout includes a navigation bar at the top with the following links: Home, Lost, Found, About Us, Contact Us, and Sign In – which you would then be redirected to your chosen destination. The homepage includes a message in the centre that displays the purpose of our platform – to participate in helping reporting and finding lost items more efficiently. Below this, two options are displayed for the user: Report Lost Item and Report Found Item, which are the primary actions for users.

We have included an imprint page with contact information (used to make it harder for spam bots to find our website address) and the required disclaimer text as needed at the bottom of the homepage.

Our CD reflects the main purpose of our database project - in hopes of creating a trustworthy community and clear way for staff and students to interact about lost items. The chosen colour scheme and font aim to make the website look coherent and approachable for a user to navigate through easily.
