Campus Claim CD.

Members: Kaan Okumus, Wiktoria Sobieska

Homepage Website Link: https://clabsql.constructor.university/~kokumus/index.html

Imprint Page Link: - https://clabsql.constructor.university/~kokumus/About_us.html

Project File Organisation:

- o   public_html/photos/ — stores all image files used on the site

- o   public_html/index.html — main landing page

- o   public_html/imprint.html — contains the imprint and disclaimer text

CSS File: The CSS file is responsible for displaying the overall appearance of the website. It includes the color scheme, font choices, style preferences, and layout ideas.

CampusClaim is our website idea used to manage lost and found items on campus. The aim is to create an efficient way for students and staff to report lost/found belongings.

The design of CampusClaim focuses on creating a clean and easy to navigate interface. Our goal was to make the platform accessible for both students and staff by using clear headings and a straightforward layout. Each section is designed to guide users quickly to their intended use while maintaining a simple and user-friendly design.

Our intention for the colour scheme was to align with our campus' theme and so we chose colours such as: #005A9E and #002B5C, which are shades of dark blue. We believe this complements our website well and represents our university. The font used is Nunito which just adds a professional look and is easy to read for a user.

The layout includes a navigation bar at the top with the following links: Home, Lost, Found, About Us, and Sign In – which redirect users to their chosen destination. The homepage includes a short message in the centre that displays the purpose of our platform – to participate in helping reporting and finding lost items more efficiently. Below this, two main options are displayed for the user: Report Lost Item and Report Found Item, which are the primary actions for users.

We have included an imprint page with contact information (formatted to make it harder for spam bots to find our email address) and the required disclaimer text as needed at the bottom of the homepage.

Our CD reflects the main purpose of our database project – to create creating a trustworthy community and clear way for staff and students to interact about lost items. The chosen colour scheme and font aim to make the website look coherent and approachable, and easy to navigate.
